

SmartGene is an Application Service Provider (SaaS) which develops and markets cutting-edge, web-based, data-management solutions in the field of genetics. Our Apps are oriented towards medical research and diagnostics, and in use by international customers worldwide (see www.smartgene.com).

To reinforce its team based in Lausanne, Switzerland, **SmartGene** is seeking a

Java Developer

Our candidate should have a bachelor's or master's degree in computer sciences and should be fluent in English. French and German would be an asset.

The ideal candidate should have the following competences:

- Java back-end programmer (Spring (Boot))
- Development of web front-ends: HTML, CSS, Javascript; React would be a plus.
- System Administration of Linux servers (bash scripting).
- Working with software quality control and documentation
- Interest in problem solving, and in biology and science in general

You will join a strongly motivated team providing advanced software services in the rapidly evolving field of genetic medicine. Our customers are university hospitals, diagnostic labs and research networks around the world.

If you have the skills and drive we seek, then we will invest in you, helping you to develop the domain knowledge you need to thrive in this fascinating world where computer-programming meets DNA.

Please address your resume in English with a cover letter and with other relevant documentation to our HR:
